

Supplementary material to

Differential scanning calorimetry-based investigations of erythritol – sodium chloride phase change composites for thermal energy storage

Paul Gregory Felix, Velavan Rajagopal and Kannan Kumaresan

PSG College of Technology, Coimbatore, India

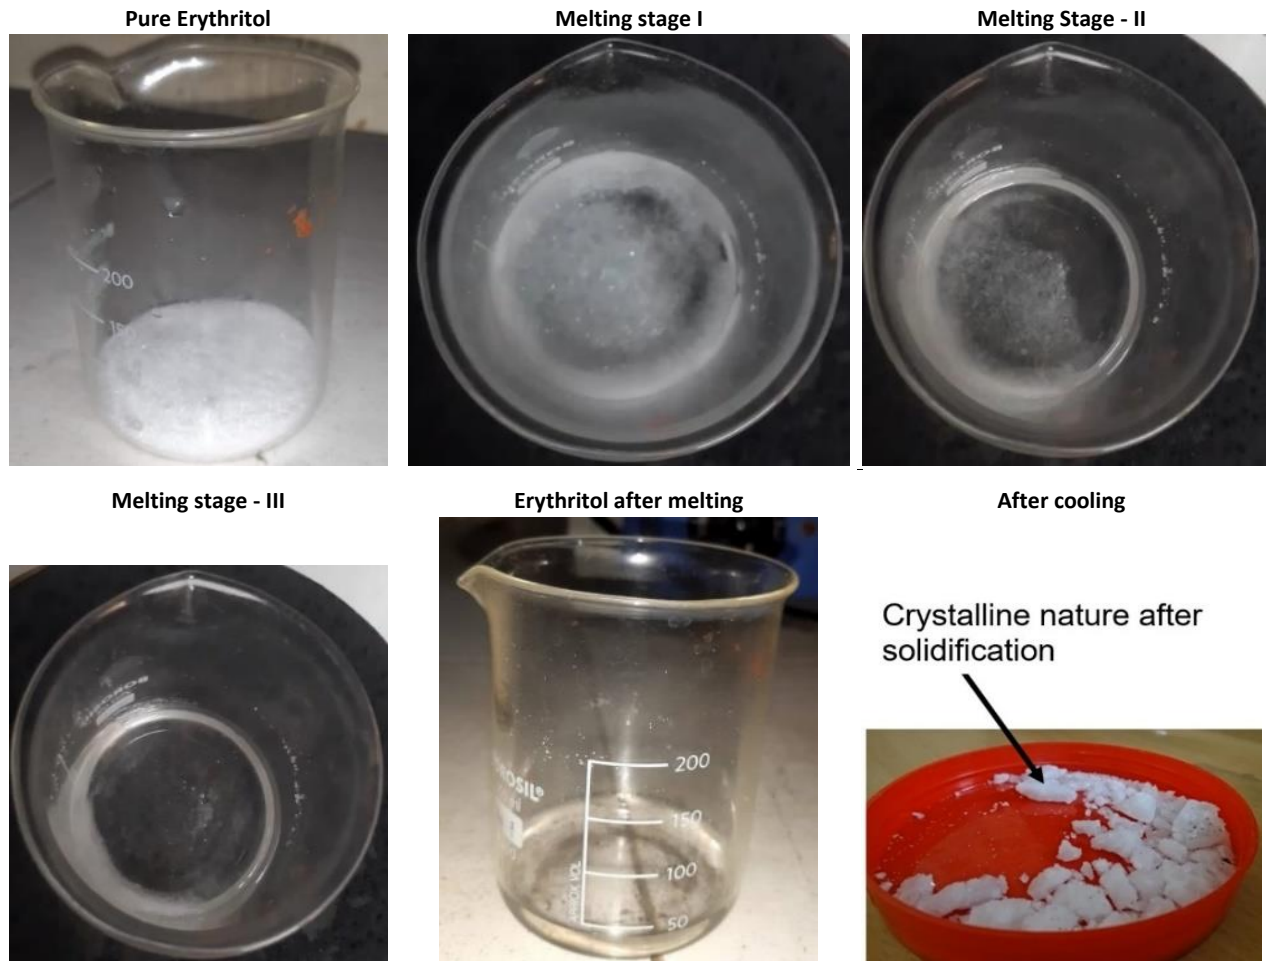

Figure S-1. Photographs at various stages during erythritol heating followed by cooling and crystallization. The photographs visualize the various stages discussed in the section 3.1 of the article

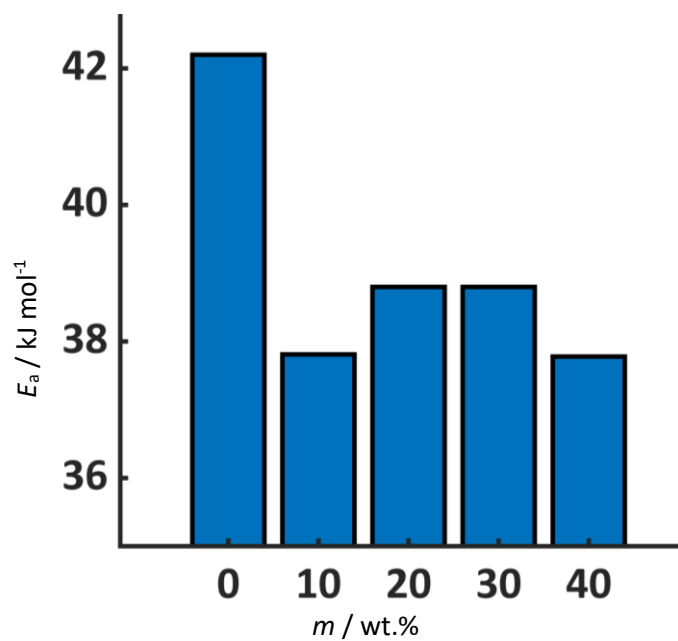

Figure S-2. Figure presents the variation in the activation energy (E_a) of the erythritol composites with respect to the increasing quantity of NaCl
